The NC FIRST Commission was created in March 2019 to evaluate North Carolina's transportation investment needs. Its job is to advise the Secretary of Transportation of new or better ways to ensure that critical financial resources are available in the future. As part of this process, we'll be looking for input from you, the people of North Carolina! This brief overviews the highway use tax and discusses why NCDOT expects these revenues to decline in the future.

The North Carolina Highway Use Tax

Overview

Upon passage of the historic 1989 legislation that established the North Carolina Department of Transportation's (NCDOT) Highway Trust Fund, the state started assessing a Highway Use Tax (HUT) on vehicle purchases rather than a sales tax. Today, the HUT is the largest source of revenue for the Highway Trust Fund's capital construction account. In FY 2019, the North Carolina Division of Motor Vehicles (DMV) processed 2.1 million title transactions that netted $797 million in revenue. FY 2020 HUT revenues are projected to be $833.9 million, or 21.3% of the state's total revenues for transportation investments. Although HUT revenues have grown in each of the last 11 years, declining vehicle sales and changes in consumer mobility preferences may lead to lower HUT revenues in the future.

How does the Highway Use tax work?

In 1989, the state switched from a 2% sales tax on vehicle purchases to the Highway Use Tax (HUT). Today, whenever a vehicle title is transferred in North Carolina, the buyer is charged a one-time, 3% HUT on the vehicle's purchase price, less any trade-in value if the vehicle was purchased at a dealership. Caps apply to vehicles registered from new residents moving into North Carolina ($250 maximum) and to commercial and recreational vehicles, such as RVs ($2,000). Motor home purchases pay a 2% sales tax, not a HUT, with revenue deposited in the state's General Fund. Depending on where a car is purchased, the tax can be paid at the dealership, at select DMV offices, or at any License Plate Agency.

If you rent or lease a vehicle, you are taxed an Alternative Highway Use Tax (AHUT). A long-term lease or rental is charged a 3% rate on the gross receipts. Revenues from the long-term AHUT are deposited in the NCDOT Highway Trust Fund. A short-term lease or rental, such as a car rental at an airport, is charged 8% on the gross receipts. Since FY 2018, $10 million of short-term lease revenues are annually transferred to an NCDOT fund for airport improvements and the remainder goes to the General Fund.
How much do I pay in Highway Use Tax?

The amount you pay in tax depends on your vehicle’s purchase price and your trade-in value. In FY 2019, the average transaction totaled $372 in Highway Use Tax. As shown in Figure 1, you paid much less tax in FY 2019 if you bought a used vehicle, averaging $276 per transaction, compared to $789 for a new vehicle purchase.

Is North Carolina’s Highway Use Tax rate competitive?

Policy makers often want to know if North Carolina charges a competitive tax rate compared to surrounding states. As shown in Figure 2, based on the average FY 2019 transaction data, vehicle buyers in North Carolina pay significantly less tax on vehicle sales than in all surrounding states. While these states use different taxing methods, such as Tennessee’s Title Ad Valorem Tax or South Carolina’s Infrastructure Maintenance Fee, the base is either the vehicle’s sales price or its fair market value.

1 North Carolina Department of Transportation
2 This information uses the average HUT paid per transaction to NCDOT in FY 2019 and assumes a vehicle value of $16,400 with no trade-in allowance. This figure is used to calculate the tax due in surrounding states.
Are Highway Use Tax revenues secure?

Several factors may limit or reduce HUT revenues in the future. Today, growing HUT revenues correlate with a slowly recovering economy. In the future, an economic downturn, shifting mobility preferences, technological changes, and improved vehicle durability are likely to reduce car sales.

Economic downturns. The amount of HUT revenues collected by DMV is linked to the state's economic health. As the economy improves, people feel more financially secure to trade-in vehicles, but during economic downturns, they keep their old vehicles longer or buy less costly options. As shown in Figure 1, HUT revenues plunged during the Great Recession. From 2007 to 2009, HUT transactions declined 21.3% and revenues declined 27.4%. Many economists believe the United States will enter the next recession in 2020 or 2021. Figure 3 illustrates that as of August 2019, 38% of economists believe a recession will occur in 2020 and 34% more believe the recession will occur in 2021.

Consumer preference for vehicle ownership will make less financial sense. Various studies suggest that it costs $706 a month to own a vehicle that sits idle 95% of the time while losing 60% of its value within the first 5 years. As ridesharing, car sharing, micro-mobility solutions, and car subscription services increase their market share, and as public transit services work to become more dynamic, these options may become more convenient and less costly than owning a vehicle. Research supports the growth of these markets. While public transit ridership declined 2% from 2017 to 2018, commuter rail ridership increased 0.41% in 2018. According to the National Association of City Transportation Officials, the number of shared micro-mobility trips, including e-bikes, scooters, and bicycles, more than doubled from 35 million trips in 2017 to 84 million trips in 2018.

Consumer opinion surveys show a weakening of Americans preference for car ownership. A 2018 Cox Automotive survey found that 40% of all survey respondents and 57% of urban respondents said that while access to transportation is necessary, owning a vehicle is not. The Zipcar-commissioned Harris Poll also supported the concept that people increasingly view transportation as a service. The results revealed that 70% of American drivers believe it is more economical to use a car-sharing service than to own a vehicle.

**Connected and autonomous vehicles will reduce individual vehicle ownership.** Ford is an example of a company that is changing business models to invest heavily in the development of connected and autonomous technologies.\(^{10}\) As vehicles become smarter and connected to a larger grid, some analysts believe individual car ownership will decline. The University of Michigan Transportation Research Institute and Barclays each estimate that car ownership will decline from today’s 2.1 vehicles to 1.2 vehicles per average U.S. household.\(^{11}\)

Analysts estimate that one self-driving car could replace 12 regular vehicles. Data from a car-sharing service also show reductions in vehicle ownership. A recent study\(^ {12}\) commissioned by Zipcar found that one Zipcar replaces up to 13 personally owned vehicles, suggesting that Zipcars’ 12,000-vehicle fleet may have taken up to 156,000 cars off of the road nationwide. The study also found that 54% of Zipcar members stopped owning a vehicle after joining.

**Vehicles are lasting longer.** Due to advances in materials and technologies, vehicles are lasting longer. In 1970, automobiles lasted 5.6 years;\(^ {13}\) now, according to IHS Markit, the average age of light vehicles in operation in the U.S. is 11.8 years.\(^ {14}\) As shown in Figure 4, average vehicle age is rising in every region in the country.\(^ {15}\) Reflecting national trends, North Carolina’s average vehicle age increased from 9 years in 2007 to 10.9 years in 2019 (Figure 5).\(^ {16}\) As owners keep their vehicles longer, the state collects the one-time HUT less frequently.

---

**What options are available to increase Highway Use Tax revenues?**

Several options are available to lawmakers if they choose to increase HUT revenues. First, North Carolina’s tax rate could be more competitive with those in neighboring states (Figure 2). Increasing the rate by 1% would yield about $275 million more per year. Second, North Carolina lawmakers may consider eliminating the incentive to trade-in your used vehicle when purchasing your next vehicle. Buying trends indicate that consumer preference will shift away from dealership purchases. The emergence of car subscription purchases, like those available in Raleigh and Winston-Salem from Drive Flow, online car buying programs used by companies like Tesla or Carvana, or companies like Costco that offer pre-arranged pricing, are likely to reduce the number of trade-in transactions at dealerships. Third, lawmakers may consider eliminating or raising the $2,000 cap on recreational vehicles and commercial vehicles. Lastly, while $10 million of the proceeds from short-term leases is deposited in the Highway Fund, lawmakers may choose to increase this transfer. Shifting the remaining funds to the Highway Fund or Highway Trust Fund would increase revenues by approximately $90 million each year.
