

TransLōc[®]

THE MOVEMENT OF PEOPLE IN THE FUTURE

Alex Gibson, Director of Mobility Strategy

AGENDA

- 1** Who is TransLoc?

- 2** Mobility Technology is Changing

- 3** What can and should we do?

WHO IS TRANSLOC?

An Innovative Leader in Connected Mobility

FORD **SMART MOBILITY**

WHO IS TRANSLOC?

Founded in 2004 by NC State University students.

Acquired by Ford in February 2018.

Software company focused on serving providers of mass transit.

Enable cutting edge management of transportation systems.

Creative business model allowing cities to effectively and safely pilot services prior to investing fully.

CITIES ARE OUR PARTNERS, NOT OUR ENEMIES.

TransLoc's success is built upon creating a culture of partnership in order to bring the very best ideas and solutions to our customers and their riding public. We foster a collaborative spirit to identify how public and private transit can offer riders the best possible experience. This culture drives us to explore new possibilities that build a better world for all.

WHY PARTNER WITH CITIES?

TransLoc **is unique** because we believe public transit needs to be central to the future of mobility, so we keep cities and agencies at the heart:

1

Transit Expertise

2

Financial Stability

3

Operator Oversight

4

Title VI & Accessibility

5

Rider Affordability

6

Sustainability

7

Access to passenger & ridership data

FORD SMART MOBILITY

WHAT IF A CITY MOVED WITH THE RHYTHMS OF ITS INHABITANTS?

INTRODUCTION OF FULLY AUTONOMOUS SAE LEVEL 4-CAPABLE VEHICLES

EBIKES

CROWD-SOURCED, DYNAMICALLY-ROUTED SHUTTLE SERVICE

ELECTRIFIED VEHICLE POPULATION INCREASES

WIRELESS CHARGING

A wide-angle photograph of a city street at dusk or dawn. The street is filled with cars, some of which are blurred due to motion. On the right side of the street, there is a modern, multi-story building with a glass facade. In the background, several other skyscrapers are visible, some with construction cranes. The sky is a mix of blue and grey, suggesting a cloudy day. The entire image is overlaid with a semi-transparent blue filter. The text "MOBILITY TECHNOLOGY IS CHANGING" is written in large, white, sans-serif capital letters across the middle of the image. Below it, the subtitle "The future may already be here." is written in a smaller, white, sans-serif font.

MOBILITY TECHNOLOGY IS CHANGING

The future may already be here.

“MILLENNIALS ARE MULTIMODAL”

The American Public Transit Association (APTA) found that younger generations tend toward non-single occupancy vehicle (SOV) options.

- Public transportation options are considered among the most likely to connect the user with their communities.
- Reasons for transportation choices are pragmatic:
 - 46% are saving money
 - 46% note convenience
 - 44% want exercise
 - 35% say they live in a community where it just makes more sense to use transit

SCOOTERS, EBIKES, & PEDELECS, OH MY!

Alternative “micromobility” modes have invaded American cities over the past 36 months. These offer a relevant, valuable transportation option for people, especially for first-mile / last-mile trips.

"Watch Out! Cities with electric scooters have seen hundreds of injuries, from broken arms to brain trauma."

Chicago Tribune

"Rage Against the Scooter Machines"

@birdgraveyard

"A Lawyer Explains why Electric Scooter Laws Don't Work"

CityLab

"Welcome, watch or ban: how should cities deal with electric scooters?"

The Guardian

RIDE HAILING, BUSINESS MODELS, AND CONSUMER BEHAVIOR

Private transportation networking companies (TNCs) like Uber and Lyft have fundamentally changed how people want to move around cities.

Instead of taxpayers subsidizing the transportation system for everyone, capital markets are subsidizing it for the well-off.

Uber & Lyft are structurally unprofitable: they may not be around much longer.

HYPERLOOPS & AUTONOMOUS VEHICLES: BEWARE THE MONORAIL SALESMAN

Innovation in vehicle, fuel, and infrastructure technology is happening, BUT...

- The technology is not there yet [despite what some would lead you to believe]
- Widespread adoption will take years [if it ever happens]
- There is no silver bullet [unfortunately]

WHAT SHOULD AND CAN WE DO?

Invest in appropriate solutions today.

CITIES ARE THE HEART OF THE AMERICAN MOBILITY ECOSYSTEM

It takes work to keep them there and make them successful.

Administer

Public officials can and should be managing and controlling the systems in their region.

Operate

Nobody is qualified to run transportation services like public transit agencies.

Serve

Mobility is a human right and public transit should serve the public good.

UNDERSERVED REGION & INCREASING ACCESS TO TRANSIT

Sacramento, California

Sacramento Regional Transit saw the need to expand transit service to regions unserved by their traditional fixed-route system. On-demand Microtransit (Uber-esque service owned by the agency) was the solution.

+200 boardings per day

20% connecting to existing light rail system

67% of rides requested in-app vs calling dispatcher

CLOSED DATA & UNUSABLE INFRASTRUCTURE

Seattle, Washington

Seattle, beset by massive urban growth and an ever-increasing technology company employer base, sought to improve access to city and public data while future-proofing their transportation infrastructure.

Seattle's Mayor Ed Murray signed an executive order in 2016 mandating that city departments make their data more accessible.

Machine-readable street signs to improve mapping and potential for autonomous vehicles.

Seattle worked with partners like Zillow to show how this type of data could be used by private entities to add value to the city and its residents.

TRANSPORTATION DEMAND MANAGEMENT

Santa Monica, California

In the 1990s, certain California municipalities introduced laws mandating Transportation Demand Management (TDM) protocols by local employers. Santa Monica city officials manage this program effectively by working with employers.

“Less regulatory, more mutually beneficial”

Employers with 10+ employees are required to submit information to the city government in order to assist with the management of transportation commuting demand.

Santa Monica uses this information to make structural changes to the transit system.

A photograph of a person's legs and feet, wearing blue jeans and white sneakers, standing on a yellow platform. The background shows a yellow vehicle, possibly a bus or train, with a wheel visible on the left. The image is overlaid with a blue gradient.

WHAT CAN WE DO?

- ✓ Work with the people to understand what they need
- ✓ Set appropriate expectations with stakeholders
- ✓ Identify opportunities to pilot, test, experiment, and learn!
- ✓ Utilize existing infrastructure more effectively

A photograph showing the lower legs and feet of a person standing on a public transit platform. The person is wearing blue jeans and white sneakers. To the left, a yellow train car is visible. The background is a blurred station interior. The entire image is overlaid with a semi-transparent blue gradient.

**INVESTING IN PUBLIC TRANSPORTATION
IS A HEDGE AGAINST THE FUTURE OF
MOBILITY NEVER ARRIVING**

THANK YOU
